Summary

Product Analyst with 3+ years of experience turning complex, large-scale datasets into decisions that move the needle. Skilled in SQL, Python, and ML — from building predictive models to shipping dashboards that stakeholders actually use. I don't just report numbers; I find the story, flag the risk, and drive the fix.

Skills

- **Programming & Databases:** SQL (Snowflake, Redshift, Presto), Python (Pandas, NumPy, PySpark, Scikit-learn)
- **Data Analytics & Visualization:** Tableau, Looker, Statistical Modeling, Dashboard Development, Data Transformation
- **Data Operations:** Data Quality Validation, ETL Processes, Query Optimization, KPI Development, Telemetry Designing, AI-Assisted Query Optimization
- **Tools & Collaboration:** GIT, JIRA, Confluence, MS-Office, AI Tools (LLMs for Analytics)

Experience

Electronic Arts (EA) **Nov 2024 – Present**
Associate Product Analyst *Hyderabad, Telangana*

- Conducted full-cycle A/B testing analysis for critical new features, providing stakeholders with clear insights on performance, hypothesis validation, and strategic recommendations, resulting in 8% improvement in feature adoption and 5% increase in D7 retention.
- Developed a Growth Model Dashboard (inspired by frameworks like Duolingo) focused on increasing user retention and engagement, translating complex data into actionable product strategies and identifying opportunities to improve D7 retention by 12% and reduce weekly churn by 18%.
- Built behavioral segmentation framework for Madden Mobile to classify player cohorts and enable targeted Live Ops campaigns; performed early-player monetization analysis to identify spend drivers and retention risks, supporting data-driven marketing optimization.
- Delivered program performance and mid-season feature analysis for Madden Mobile to guide product roadmap decisions. Maintained legacy metadata pipeline built in R and automated in Python to eliminate manual loading, reducing operational overhead and accelerating insight delivery.
- Managed and validated data quality across petabyte-scale user datasets (Snowflake, Redshift). Leveraged AI tools securely to optimize complex SQL queries, reducing query execution time by 65% and improving dashboard refresh rates, dramatically improving efficiency without compromising data integrity.

Netcracker Technology Solution(India) Private Limited **Sep 2022 – Oct 2024**
QA Engineer *Gurgaon, Haryana*

- Led data migration testing and validation across 10M+ records using Advanced SQL and Python automation scripts, ensuring zero data loss and improving data accuracy metrics by 28%. Reduced manual testing effort by 55% through automated data quality checks using Pandas.

Projects

Madden Mobile Live Ops Analytics & Automation | *Python, R, SQL, Tableau, PrestoDB*

- Built behavioral segmentation framework for 1M+ players identifying spend drivers and retention risk factors, enabling targeted Live Ops campaigns and data-driven strategy optimization.
- Automated legacy R metadata pipeline in Python, reducing manual processing overhead by 80%, enabling stakeholders to access actionable insights daily instead of weekly and accelerating decision-making cycles.

Achievements

- **STAR Performer Award:** Recognized as top **5%** of employees for outstanding performance at Netcracker.
- **Certified Advanced Data Analyst** by Google, demonstrating proficiency in data analytics, statistical modeling, and visualization.

Education

University of Hyderabad **Aug 2019 - Aug 2022**
Masters in Computer Applications (CGPA: 8.28) *Telangana, India*

University of Rajasthan **Jun 2015 - Jul 2018**
Bachelors in Computer Applications (69%) *Rajasthan, India*
